Abstract—This paper presents an overview of a data science and machine learning project. The objective is to demonstrate the creation of a research article using LaTeX and the IEEE conference template. This work also emphasizes structuring sections and integrating external resources such as a GitHub repository. This abstract summarizes the purpose of the paper in a few sentences.

Index Terms—LaTeX, IEEE conference format, data science, machine learning, academic writing

GitHub Repository: https://github.com/mk19409-prog/DS_and_ML_Project_Article_LaTeX

I. INTRODUCTION

This section introduces the problem domain and the motivation behind the project. The section introduces the topic and explains why it is important.

II. LITERATURE REVIEW

This section summarizes existing research or tools related to the project topic including referencing article [1].

III. MAIN METHODOLOGY

This section describes the dataset, tools, and methods used in the project. Describes the methods or steps taken to complete the project.

For this assignment, the project methodology includes using LaTeX for document preparation, following the IEEE template, and organizing content into structured sections. All materials are maintained in a [GitHub repository: DS and ML Project](#).

IV. RESULT ANALYSIS

This section highlights preliminary results and discusses observations. This basically discusses what we achieved or produced through the research.

V. DISCUSSION AND FUTURE WORK

This section discusses the findings of the project and highlights key observations from the analysis. Reflects on what was learned and what could be done next. It demonstrates critical thinking, noting the strengths of the work and suggesting improvements for future assignments or projects.

Identify applicable funding agency here. If none, delete this.

VI. CONCLUSION

This section summarizes the main points of the paper and what was accomplished. In this assignment, it demonstrates that we successfully used LaTeX, followed the IEEE template, and integrated a GitHub repository, rather than reporting scientific results. It highlights the completion of the document with proper formatting.

ACKNOWLEDGMENT

The author thanks the instructor and department for guidance, funding, and support.
